PHONE / TABLET REQUIREMENTS

iOS 7.1 & above

Android 4.5 & above

Bluetooth 4.0

QUICK START GUIDE

1. Download the 'VeryFit 2.0' App

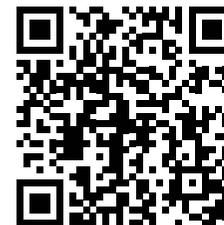

To set up your wristband you will first need to pair it with your phone/tablet using the VeryFit 2.0 App. There are 2 options for downloading and installing it:

Option 1: Search for 'VeryFit 2.0' in the App store

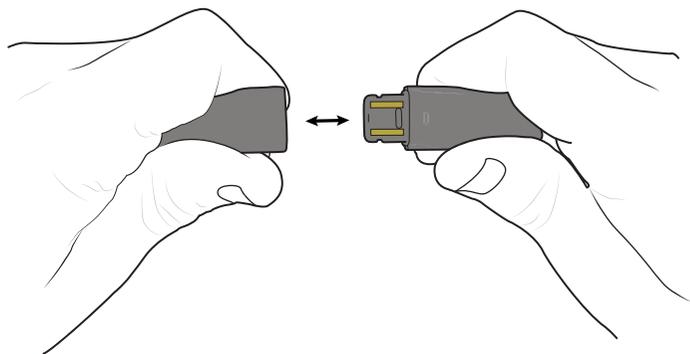

Search for and download the 'VeryFit 2.0' App from the Apple or Google Play store. If you are installing on an iPad, you will need to select the 'iPhone Only' search option in the Apple store to reveal the VeryFit 2.0 App.

Option 2: Scan QR code to download the App

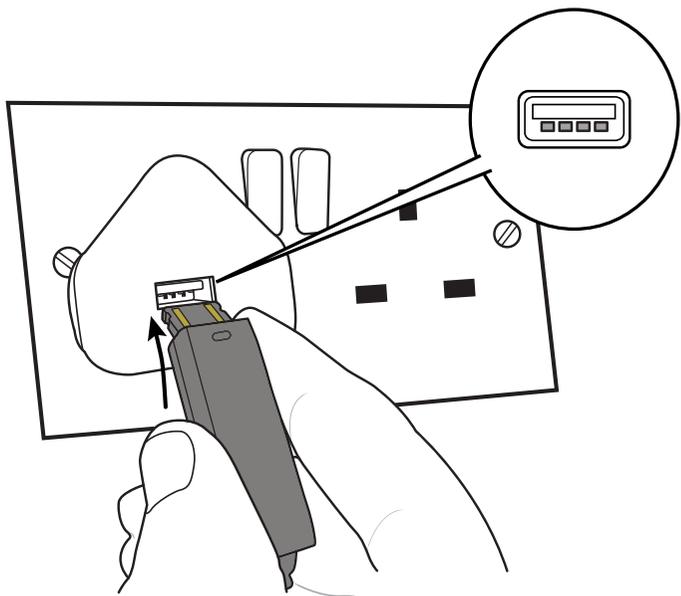

Use a QR code scanning App on your phone/tablet to scan the relevant QR code below. This will open the corresponding App store ready for you to download the 'VeryFit 2.0' App.

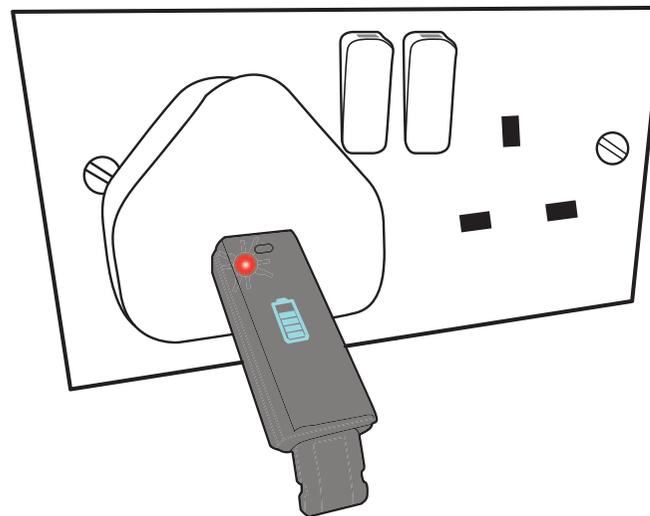

2. Charge your wristband

Remove both straps from the body of your wristband to expose the 2 gold coloured USB charging strips at one end.

Plug the body of your wristband into a USB socket, ensuring that the 2 gold coloured charging strips are facing the 4 charging contacts inside the USB socket.

Once plugged into a USB socket, a red light and charging symbol will appear to indicate that your wristband has started charging. If the screen does not light up, ensure that you have plugged it in the correct way round and that the gold coloured charging strips are facing the 4 contacts inside the USB ports.

Your wristband will take 1-2 hours to fully charge.

3. Pair your wristband

On your phone/tablet, open the 'VeryFit 2.0' App and follow the on screen set up instructions. When you reach the 'Add Device' page and searching has completed, tap on 'ID115' in the list and tap OK. Your wristband will vibrate briefly to confirm that you have successfully paired it. Continue to follow the on screen instructions to complete the set up process.

If the App fails to find your wristband, check that your phone/tablet's Bluetooth is enabled, plug your wristband into a USB socket and repeat the search.

HOW TO USE

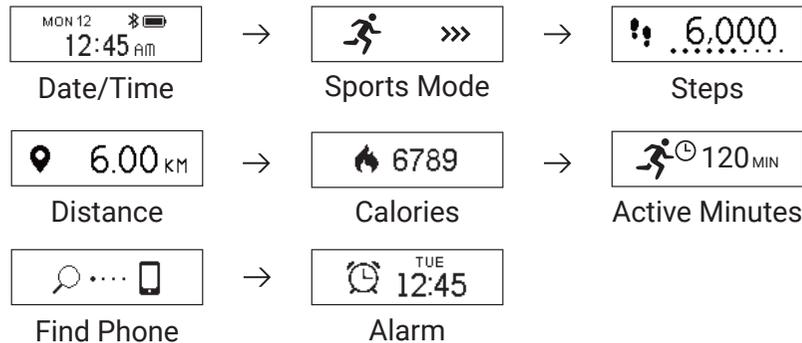

Function Button

Tapping the touch sensitive function button at the bottom of the display will cycle through your stats.

MODES

1. Normal Mode

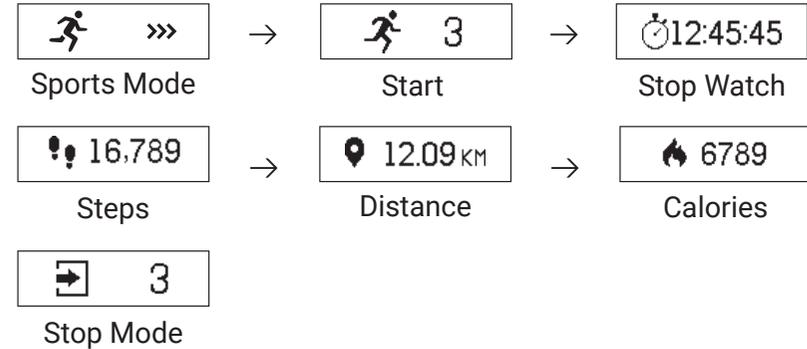

2. Remote Camera

To take photos remotely using your wristband, open the 'VeryFit 2.0' App, tap 'Device' from the menu bar and select 'Take Photo'. Position your mobile device in the desired location for taking a photo and use the function button on your wristband to take a photo. Rotating your wrist will also take a photo when this mode is active.

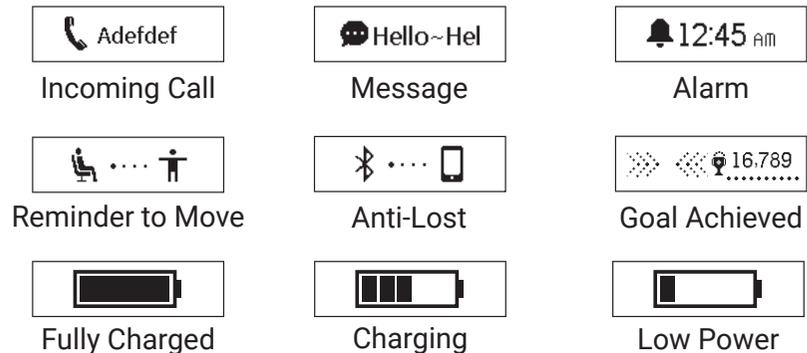

3. Sports Mode

Sports mode allows you to track stats for a specific period of time. For example, you may wish to see how many calories you have burned or steps you have achieved during a run or other type of activity.

To start Sports Mode, tap the function button until Sports Mode appears, then long press the function button and Sports Mode will begin. Whilst in this mode you can cycle through different stats by tapping the function button. When you no longer require Sports Mode and you have finished reviewing your stats, you can exit this mode by long pressing the function button again.

4. Notification Mode

FUNCTIONS

Activity Tracking

Your wristband tracks daily activities including steps, distance, calories burned and minutes you were active for during the day. Your stats can be checked on your wristband at anytime, or by using the App for a more detailed view.

Sleep Tracking

Your wristband will automatically track how long and how well you sleep. Stats including light sleep, deep sleep and duration awake can be viewed in the App.

Silent Alarms

Set an alarm in the App and your wristband will vibrate to wake you peacefully.

Reminders to Move

Your wristband will give you gentle reminders to stay active throughout the day if you are stationary for too long.

Call, Text & Social App Alerts

See alerts for incoming calls, text messages and notifications from Facebook, Whatsapp, Twitter, Instagram and more.

Remote Camera Control

Take photos with your phone/tablet using your wristband to trigger the shot remotely.

Anti-Lost

Your wristband will alert you if you move more than 5 metres away from your phone/tablet.

Find Phone

Use your wristband to trigger an audio alert on your phone/tablet until you have located it.

Wristband Data Storage

Activity data displayed on the wristband is reset every day at midnight. Up to 7 days of data can be stored on the wristband without the need to sync it to the App. To sync your data, open the App and swipe down anywhere on the main page. Progress will then be indicated at the top of the page.

SPECIFICATIONS

Model: ID115-XXX

Main Body Size: 38 x 15 x 10mm

Wrist Size: Smallest – 14cm, Largest 21cm

Screen: 22mm OLED Touch Sensitive

Battery: Built-in rechargeable 60mAh Lithium Polymer

Waterproof: IP7x (splash proof)

System Requirements: Apple iOS 7.1 & above (iPhone 4s & above, iPad 3rd Gen & above, iPod Touch 5th Gen & above)

Android 4.5 & above

Bluetooth Version: 4.0 & above

Package Contents

1 x Delvfire Ignite Activity Wristband

1 x Instruction Manual

1 x Warranty Card

FAQs - Charging

Why isn't a charger included?

Your wristband is charged by USB and can be plugged into any USB socket on a computer, phone/tablet charger or power bank. This does away with the need for a special charger and messy cables. For the correct way to charge your wristband, refer to section 2 of the Quick Start Guide on the other side of this user manual.

Why won't my wristband charge?

The most common problems are a) the wrong end of the wristband body has been inserted into the USB socket, b) the 2 gold coloured charging strips on the wristband are not facing the 4 charging contacts inside the USB socket. Refer to section 2 of the Quick Start Guide on the other side of this user manual for more information.

Pairing

Why can't I pair my wristband?

1. Make sure your phone/tablet meets the minimum requirements of Apple iOS 7.1 & above (iPhone 4s & above, iPad 3rd Gen & above, iPod Touch 5th Gen & above), Android 4.5 & above, Bluetooth Version: 4.0 & above.
2. Make sure your phone/tablet has Bluetooth switched on.
3. Whilst searching for your wristband during set up within the App, ensure that the wristband's display is on and close to your phone/tablet.

If you are still unable to pair your wristband to your phone/tablet within the VeryFit 2.0 App then please do the following exactly as instructed:

1. Switch off your phone/tablet and restart it.
2. Ensure your phone/tablet's Bluetooth is switched on.
3. Delete the VeryFit 2.0 App from your phone/tablet.
4. Open the Bluetooth settings on your phone/tablet and delete/forget all devices listed (you can add these back later).
5. Reinstall the VeryFit App (don't open the App at this point).
6. Plug your wristband into a USB socket away from other USB devices that might cause interference and make sure that the charging symbol is on screen to show that it's charging.
7. Open the VeryFit App and run through the set up. At the point where the App starts searching for your wristband, hold your phone/tablet close to your wristband and ensure that the wristband's display is turned on.
8. You should now be able to select ID115 (your wristband) from the device list to complete the set up process.

Steps

Why isn't my step counter working correctly?

First you need to install the VeryFit 2.0 App and run through the set up process to pair it to your phone/tablet. Your wristband will not function correctly if you skip this.

When you first set up your wristband it will go through an initial calibration phase which can take up to a day to complete. During this time you may find that steps may either not register correctly or appear to jump around. This is completely normal. After the first day of use, step counting will register and record as expected.

It's also worth pointing out that after the calibration period, the display will not always update in real time (step-by-step) as you are walking. Under certain circumstances the screen will update in batches of steps. This is especially apparent when walking whilst watching the display.

If after the initial calibration period your steps are not registering, we recommend resetting your wristband. To do this, open the VeryFit App and go to **User > System Settings > Restart Device and tap Confirm Reboot**. This will backup the data on your wristband and factory reset it. Once this operation is complete your data will be restored back to your wristband.

Why do my steps keep reverting back?

If you walk less than 35 steps within a certain amount of time, these steps will not be stored. This is to help improve accuracy by filtering out movements other than steps, for example typing on a keyboard and washing your hands.

Syncing

Why isn't my activity data showing in the App?

To transfer your activity data from your wristband to the App on your phone/tablet, open the VeryFit 2.0 App and swipe down anywhere on the main page (the first page you see when you open the App).

Misc.

Why can't I see all functions on my wristband?

Some functions require turning on from within the VeryFit 2.0 App before they will appear on your wristband.

How do I factory reset my wristband?

Make sure your wristband is connected to the App. Open the VeryFit 2.0 App and go to **User > System Settings > Restart Device and tap Confirm Reboot**. This will backup the data on your wristband and factory reset it. Once this operation is complete your data will be copied back to your wristband.

How do I install the VeryFit 2.0 App on an iPad?

First check that your iPad is 3rd generation & above and is running Apple iOS 7.1 & above.

1. Tap the Apple Store icon on your iPad and search for VeryFit 2.0.
2. Change the search filter option (normally top left of the Apple Store App) from 'iPad Only' to 'iPhone Only'.
3. Tap the 'Get' button next to VeryFit 2.0 to install it.

Is my phone/tablet compatible?

Apple

iPhone 4s & above
iPad 3rd Gen & above
iPod Touch 5th Gen & above

OS: Apple iOS 7.1 & above

Android

OS: Android 4.5 & above
Bluetooth v4.0 & above

Windows

Not currently supported

Is my wristband waterproof?

Although this wristband is certified IP67 waterproof, we recommend that you only use it for day-to-day activities like showering and washing your hands. We don't recommend that you swim with it or leave it submerged in water for ANY length of time.

Will my wristband work independently of a phone/tablet?

In order to set up your wristband you first have to pair it with a

phone/tablet. The wristband needs to know the current time/date from your phone/tablet, plus information such as your age, height, weight, preferred units of measurement (metric or imperial) and your activity and sleep goals. This all goes towards the tracking algorithm it uses to calculate activity/sleep stats. However, once you've been through the initial set up there is no need to keep it connected to your phone/tablet in order for it to function correctly.

Can I connect more than one wristband to my phone/tablet?

Yes, you can connect up to 2 wristbands to a single phone/tablet. To do this you will need to install a second App to pair with the second wristband. We recommend 'VeryFit Pro'.

How do I get call, text or social alerts on my wristband?

First, ensure that Bluetooth is enabled on your phone/tablet and that the following settings are turned on within the Device tab of the App: Call Alert (to see incoming calls), SMS Alert (to see incoming text messages), SNS Alert (for social alerts like Facebook, Instagram, WhatsApp).

How do I set the time and date?

The date and time get set automatically when you pair your wristband to your phone/tablet during the set up process in the App. If you need to change the time in future e.g the clocks have gone back/forward, you simply open the VeryFit App on your phone/tablet and swipe down anywhere on the main page to initiate a sync.
